

MARCH 2021

As we head into March we will begin to explore South America! With spring around the corner there are so many changes to discover as trees and flowers begin to bud and the weather starts to warm. We will focus a lot on these changes which will include life cycles of frogs, chickens, and butterflies. We will also incorporate a lady bug habitat into the classroom and observe the life cycle of a lady bug up close. We will have the opportunity to set them free when they are full grown! We will also continue to learn about money denominations and basic math. We will add soap sud making to our Practical Life area which will include bar soap grating, egg beating, water and of course bubbles.
